Future Plan

We have a plan to implement some new features. We will create a chatbot using artificial intelligence for the user which will help the users by giving them many information when user asked. And another important plan is, we will implement a feature which will analyze users daily activities, health status such as blood pressure,pulse,weight etc and this will suggest users a diet chart to keep him fit according to his activity. We have a idea which will connect users to the hospitals and doctors for taking appointment of any doctor from home using this application.

Objectives

This is the recent statistics of death in our country. We want to help people to keep them fit and aware them about diseases so that we can make a healthy society. Our main target is to built an android application that can prove to be the ultimate care taker of your health. In the above diagram, there are the main objectives of our application.
